

## **Fitting instructions for corsa / astra/ cavalier gear knob.**

1. Remove the original gear knob. The easiest way to do this is to first turn it around for a few turns until it becomes easier to turn. Then continue to turn while pulling upwards & rocking it. Be careful it doesn't fly off suddenly as injury may result.

After removal you should see this:

2. Remove any rubber residue from the plastic section, and then fit two O rings into the grooves in the plastic section:

3. Carefully push the pool ball onto the gear lever. Make sure the O rings enter the ball and do not get forced over the “ridges” by the ball’s bottom edge, or they will be damaged.

If necessary rotate the ball to align the number. Check you can engage all gears and the ball is secure before driving your car. Enjoy your new pool ball gear knob!
